HORIZON 2020 LETTER OF SUPPORT USER BOARD

Participation in the "Deeply Integrated and Semantic Extended Point Clouds" User Board

I would like to strongly support the HORIZON 2020 proposal "Deeply Integrated and Semantic Extended Point Clouds".

With the evolution of the sensors and the algorithms for producing 3D datasets with high density and richer semantics, the need of new data models for storing and exploiting efficiently nD point clouds has rapidly increased.

The ICGC is an institution committed to the generation of quality information to serve the territorial planner to take informed decisions. Optimizing and enhancing the management of massive nD point cloud datasets will increase the capability of analyzing the available information. Therefore, we support the proposal and we would like to participate in the user board along with the different institutions with similar objectives from different approaches, and provide our experience as a data and information providers.

With best regards,
Antonio Magariños
