Horizon 2020 Letter of Support – Participation in User Board

I would like to express my unreserved support for the Horizon 2020 proposal, entitled “Deeply Integrated and Semantic Extended Point Clouds”, and my enthusiastic willingness to serve on its user board.

A number of modern measurement technologies are capable of generating high-density point clouds with massive data volumes. As these technologies become more and more commonly employed, the need of efficient ways for their acquisition, management, processing, analysis, and visualization also becomes more acute. The innovations put forward in the aforementioned proposal are not only timely but also crucial in addressing such a need. Therefore, should the proposal be awarded, I would gladly provide support to and collaborate with the team members of the proposing consortium and the other user board members.

Sincerely,

A handwritten signature in dark ink, appearing to read "Kwo-Sen Kuo".

Kwo-Sen Kuo, PhD
